Proactively Monitor App Performance
## with Mendix Application Performance Monitor

Get a Grip on Performance Right Away

There is nothing more frustrating to users than performance issues. As applications become increasingly complex, though, finding the root cause can be a daunting exercise. Mendix addresses this challenge by providing a unique set of tools as a cloud service to get a grip on performance from an early stage.

Proactively Ensure Application Reliability

As applications continue to develop dependencies on a variety of technologies and services, the need for proactive performance monitoring is crucial. Performance issues directly impact business productivity, customer satisfaction or even loss of revenue.

Without the proper tools, pinpointing performance issues is like looking for a needle in a haystack. The Mendix Application Performance Monitor offers a rich set of tools to prevent performance issues early in development cycles, and proactively address them if they manifest in production.

> " The Application Performance Monitor identified a few Microflows in our application for which performance improvements could be implemented. Alongside the more structural recommendations, we also achieved some nice 'quick wins' with the APM tool. This gave us the opportunity to achieve instant results with relatively little effort.

Dr. Sandor Schmikli, Senior Data Manager at Julius Center

Monitor Performance for a Better User Experience

The Mendix Application Performance Monitor provides point-in-time visibility, tracking and diagnostics for a better user experience.

Trap Tool
Continuously records all levels of logging and stores it when an error occurs.

Statistics Tool
Identifies trends by gathering statistics of application performance.

Performance Tool
Analyzes individual functions and visualizes where improvement is possible.

Measurements Tool
Monitors the CPU and memory, performs measuring queries and alerts if a limit is exceeded.

MANSYSTEMS

The Power of an Ecosystem

The Mendix Application Performance Monitor has been developed in partnership with Mansystems. Mansystems was founded in 1991 and has a proven track record in delivering integrated Service Management Solutions. A Mendix partner since 2010, Mansystems has become a leading business and technology partner in our ecosystem. The Mendix Application Performance Monitor is a unique offering that provides the Mansystems product as a Mendix Cloud service.
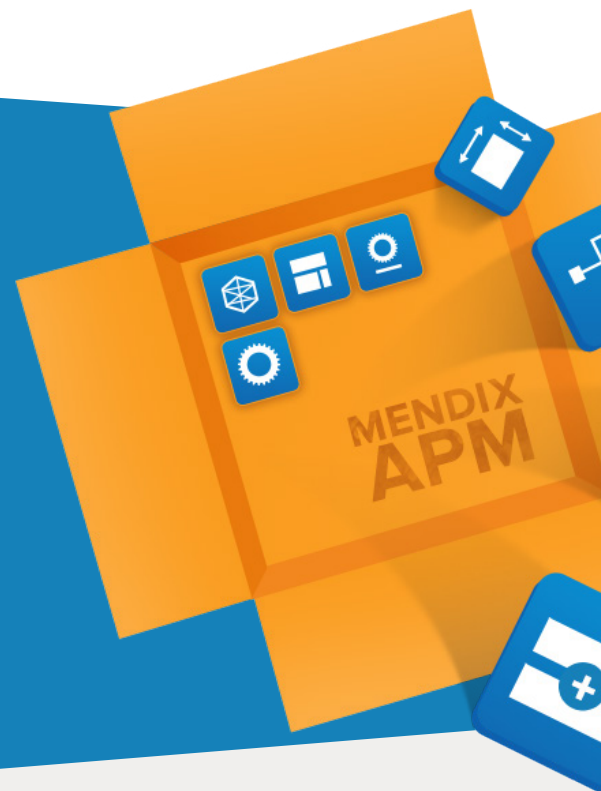

GETTING STARTED

The Mendix Application Performance Monitor comes as an add-on subscription for a single application or for your whole portfolio.

To maximize the value of using the test suite, we have defined a starter pack that offers training and coaching for developers and managers, delivered by experts from Mansystems.
