Digitalization @ Speed + Scale

Why Mendix and AWS

Digital execution is often stalled by a lack of resources and budgetary constraints, leading to huge backlogs. Add in inflexible legacy systems, and you have enormous barriers for any organization.

Imagine an environment where you can build a digital ecosystem of apps that connects to existing systems, has a library of pre-built, reusable components, and can take advantage of the power AWS has to provide.

With Mendix and AWS, you don't have to imagine. From procurement and development to testing and deployment, the future of development is within your reach.

Mendix and AWS: Better Together

More straightforward, more efficient, more effective

Optimize development across the enterprise using ready-made AWS connectors and templates. Purchase Mendix directly through the AWS Marketplace for streamlined procurement.

Legacy modernization

Maximize modernization potential and cloud investments by integrating cloud-native apps with legacy systems.

User experience

Develop engaging, feature-rich user interfaces by integrating AWS services for text recognition, image recognition, speech-to-text, and more.

Sustainable digital transformation

Take advantage of everything AWS and Mendix have to offer to make continual innovation a practice, not a goal.

Mendix and AWS in Action

Scalability

125 live events supported by Mendix and AWS, 1-2 million MQTT messages processed per event

WRSTBND

Speed and Efficiency

AWS services, hundreds of apps, 6-10x speed of development

ENEXIS GROEP

Data and Monitoring

Greater transparency across the supply chain

AntTail

"Mendix on AWS is a key driver of our digital transformation...It's the best of both worlds—the speed and innovation of Mendix with the security, scalability, reliability, and availability of AWS."
